

Special Projects *(integrated/stand alone services):*

- Application of Free Mounting System (FMS) – Platform for crystal optimization
 - Diffraction optimization of customer crystals by dehydration (FMS™ and FMS – Laser™)
 - Improvement of ligand occupancy (FMS-Pico-Dropper™)
- *De-novo* structure solution using diffraction data from customer
- Biologics structure determination using customer antibody/Fab + antigen
- Data collection at Synchrotron (SLS-Swiss Light Source, Zurich)
- Fragment screening and structure solution
